Compucon Stitch N Sew is a professional embroidery software that is

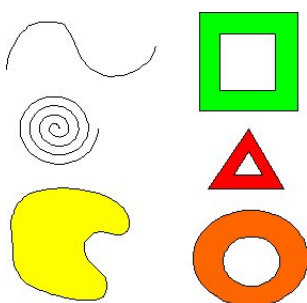

generic to all embroidery machine models. Use the program independently with your Brother, Baby Lock, Singer, Bernina, Janome, Elna, Viking or Pfaff and create lovely embroidery designs. Stitch N Sew saves in all popular formats including DST. Jenny's Sewing Studio rates [Stitch N Sew as special!](#)

[Stitch N Sew software is sold as a complete suite or in optional components](#) that can be added on at any time to build to the complete suite. When you purchase any option you will get an editing platform with one block lettering font called add a font. Each option is completely editable so you can change size and shape and color. The package also has a CD of instructions so you can get right to creating your embroidery master piece.

Options include Hyper font, Photo stitch, Cross stitch, auto punch, designer (manual digitizing) and lettering packages. I have created a video to explain each option on-line.

[Click here to see some of the lessons created.](#)

The Designer is a unique option! With this embroidery software you can create outlines, satin lines, free forms and shapes. Create cutwork, applique', red work and digitize imperfect artwork. The option has a magic wand so you can click on an area and Designer will digitize the line or shape with fill or outline automatically. The Designer comes with an editor to change the fill type, start and stop points, stitch angle and fill shape.

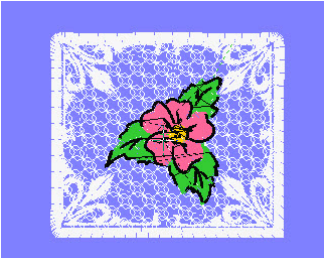

[Read more about the designer in our blog article.](#)
